East Meadow, August 19, 2019

Lufthansa Innovation Hub launches the "Compensaid" sustainability platform and focuses on CO₂ neutral aviation fuels

- **Travelers can use the new platform to replace their flights' fossil fuel with Sustainable Aviation Fuel (SAF)**
- **Airline passengers can reduce up to 80 percent of their CO₂ emissions**
- **"Compensaid" provides a transparent overview of a person's travel history and associated CO₂ emissions across all airlines**

CO₂ neutral, synthetic fuel is one of the most promising alternatives for making the future of aviation climate-neutral. Industry and nationwide deployment has failed thus far due to limited quantity and high cost. With the launch of "Compensaid" (www.compensaid.de), the new sustainability platform, the Lufthansa Innovation Hub and the Lufthansa Group are now making it possible for travelers to offset their individual carbon footprint using Sustainable Aviation Fuel (SAF). This presents passengers an entirely new approach to offsetting CO₂ with SAF in a transparent way.

"Flying benefits our world in many different ways - it connects people, helps bridge cultural divides, intensifies business relations and enables interactions to take place across long distances. But flying also has negative climate effects which need to be counteracted - not least from a digital perspective. Every individual traveler can take action: With "Compensaid," we provide people with a tool that shows them the climate effects of their flights. This impact can be reduced significantly with the help of innovative technologies such as sustainable fuel," explained Gleb Tritus, Managing Director Lufthansa Innovation Hub.

"Compensaid" combines an innovative tracking tool for all airlines flights, worldwide, with a sustainability platform that makes it possible to directly offset one's personal CO₂ emissions. Travelers then receive a detailed evaluation of their entire travel history, which not only includes flight distance, time and destinations, but also shows the efficiency of the respective aircraft type, individual fuel consumption, and the associated CO₂ emissions.

Travelers have two options for CO₂ offsetting: For the first time, they can replace fossil aviation fuels one-to-one with SAF. The platform calculates the market-based surcharge in comparison to fossil kerosene. Travelers willing to pay this surcharge can use it to cover their individual kerosene consumption with the climate-neutral fuel. The Lufthansa Group will continue to pay the basic rate for the kerosene. The SAF purchased as part of the offsetting process will be deployed on

Lufthansa flights within a period of six months. This is the first online platform of its kind to provide end customers with a transparent, quick and effective way to offset their CO₂ consumption when flying using CO₂ neutral fuels. As an alternative, travelers can also use "Compensaid" to support a reforestation project in Nicaragua and thus reduce CO₂ emissions over the long term.

Compensaid's first partner is the Swiss climate protection foundation myclimate, a long-standing partner of the Lufthansa Group in the field of voluntary CO₂ offsetting. The company will also be working with the Corporate Fuel Management of the Lufthansa Group, whose fuel experts purchase the certified alternative fuel globally and supply it to Lufthansa flight operations.

"Sustainable Aviation Fuel is a groundbreaking way to produce sustainable kerosene. We are delighted to support "Compensaid," an innovative platform that for the first time enables customers to invest in CO₂ neutral fuel for their flights," said Thorsten Luft, Head of Fuel Management at Lufthansa Group.

Travelers can use the first test version of "Compensaid," which launched in the beginning of August at www.compensaid.de. In response to expected customer demand, plans are in the works to expand the partner network for offsetting and to extend the service to all means of transport and their CO₂ emissions.

Taking responsibility in the Lufthansa Group

Taking responsibility for the environment and society is a guiding principle for the Lufthansa Group. The Group has repeatedly demonstrated its commitment in recent years, first and foremost with its ongoing investment in increasingly efficient, economical, and quieter aircraft. In addition, the Group began the world's first long-term test of bioerosene in regular flight operations in 2011, supports climate research, and has equipped the A320 fleet with noise-reducing vortex generators.
